

Typography & Font Hierarchy Guidelines

System specifications, style tokens, and viewport scaling constraints.

Primary Typography Family

The studio uses Inter as its primary brand font. It is a highly legible variable geometric sans-serif designed for screens, providing a clean, technical, and premium feel.

CSS Font Family Declaration:

```
font-family: "Inter", ui-sans-serif, system-ui, -apple-system, BlinkMacSystemFont, "Segoe UI", sans-serif;
```

Font Size & Scale Hierarchy

All font size hierarchy rules implemented across page layouts are detailed in the spec sheet below:

Header Token	Mobile Size	Desktop Size	Weight	Tailwind Class
Page Title (H1)	5xl (3rem / 48px)	8xl (6rem / 96px)	Bold	text-5xl sm:text-7xl md:text-8xl font-bold...
Section Heading (H2)	4xl (2.25rem / 36px)	5xl (3rem / 48px)	Semibold	text-4xl sm:text-5xl font-semibold tracking-[-0.06e...
Sub-headings (H3)	2xl (1.5rem / 24px)	3xl (1.875rem / 30px)	Bold	text-2xl sm:text-3xl font-bold tracking-tight
Body Text (P)	lg (1.125rem / 18px)	xl (1.25rem / 20px)	Normal / Light	text-lg sm:text-[1.125rem] md:text-xl font-light leadin...
Badges & Labels	text-[17px] (17px)	text-[17px] (17px)	Semibold / Mono	text-[17px] font-mono tracking-wider

System Rules & Implementation Constraints

- **Minimum Font Size Guard:** No font size used on text blocks, addresses, or metadata label descriptions is allowed to be less than 18px (or 17px in specific technical tags/mono details). Smaller defaults

like 12px or 14px have been deprecated to maintain maximum legibility.

- **Line Height (Leading):**

Large headings use compressed leading (e.g. 1.02 to 1.08) to maintain density and structural unity. Body text uses relaxed leading (1.5 to 1.6) for optimal paragraph flow.

- **Letter Spacing**

(Tracking): Large headings utilize tight negative letter-spacing (e.g. tracking-tighter or tracking-[-0.06em]) to balance characters at scale, while code markers and labels use positive tracking for contrast.
